## Abstract

This is an example on how to make a reproducible paper. We are using R from Rstudio, creating an RSweave document. This is a nice start to create a nice paper and get an A+. The next sections will show the steps taken.

## 1 Introduction

This is my intro to my great paper, I will explain the cool things I can do with my new ‘computational thinking’ powers combined with some Latex.

## 2 Explaining Labels

Sections may use a label<sup>1</sup>. This label is needed for referencing. For example the next section has label *datas*, so you can reference it by writing: As we see in section 3.

---

<sup>1</sup>In fact, you can have a label wherever you think a future reference to that content might be needed.

### **3 Data analysis**

Here you can explain how to get the data.

#### **3.1 Exploration**

Here, I start exploring the data.

#### **3.2 Modeling**

Here I can propose a regression model.
